So you're interested in what Remote Desktop Manager has to offer? Great. Let's check up some of its feature.

Right away you'll notice that the interface provides a single pane of glass so that you can remain productive even when working with multiple sessions at once.

With Remote Desktop Manager it's easy to organize and manage all your remote connections, credentials, and tools from a central location so that everything is easy to access and share with your team.

Not only can you quickly access your favourite remote sessions like RDP, SSH and, VNC, but we also integrate over 160 different technologies for you to choose from.

Set up automated tasks like launching remote servers through a VPN, running a synchronizer or even broadcasting actions to multiple machines at once.

Working with a team, managing permissions is a breeze with our granular role-based access system. This gives you ultimate control over which users have access to which assets.

Admins will enjoy the enhanced security features, like our credential injection system which launches remote connections without ever revealing the credentials to the user.

What about logs and reporting features? Well, we have you covered there as well with all sorts of reports and activity logs so you can stay compliant and create your proper audit trail if needed.

With Remote Desktop Manager, managing all your connections and securing access to critical assets is simple and straightforward.

Why don't you give it a try and download it for yourself today?
