

One laptop per child that's our name and our vision.

We want to create educational opportunities for the world's poorest children

By providing each and everyone with a rugged, low cost, low powered, connected laptop

And this is that laptop: say hello to the XO.

A computer unlike any other, a computer designed specifically to work in tough conditions and remote areas.

It comes packed with software and activities to help kids learn, explore, create and share.

No matter what language they speak or where they live, the XO connects them to each other, to the world and to a brighter future.

We are a non-profit organisation which makes these kids our mission not our market.

That's why wherever the XO goes, there are five core principles everyone agrees to :

First kids get to keep the laptops, they have to be free to take them home and use them whenever they want. That's kind of a point.

Second, we're focused on early education, which means kids about 6 to 12 years old.

Third, we have to deal in large numbers of laptops, so whole classrooms and schools get them at the same time, so no one gets left out.

Fourth, kids should have a connection to the Internet because there's neat stuff to learn on the Internet.

Fifth and finally the XO must include free and open source software.

Then the laptop itself can easily grow and adapt with the needs of the child.

So in a nutshell, that's us : an organisation that makes a small computer to serve a big cause

bringing education to children all over the world with one laptop per child.
